

With evolution of internet not only created a global village but also created a whole new living space CYBER SPACE. The Cyber Space is constantly expanding and penetrating to every aspect of common man and equally spreading into Governments and Private Corporations at much faster space. This Cyber Space has created all-new threats threatening Governments, Corporations and individuals in their own dimensions though. Cyber space is threatened every day with new forms of malware varying virus, Trojans, worms, adware, spyware, rootkits and evolving through Advanced Persistent Threats.

RTTS India being pioneer in building secure embedded systems for military grade hardware has made big leap into Cyber Defense Applications development arena. We provide various solutions protecting the cyber assets of Governments, Corporations and Desktops. We have done pioneering efforts to build various anti malware technologies protecting the individual's computers, networks, web applications and others from known & unknown threats. We work various government agencies on requirement and deliver the user specified products.

Our Technologies and Capabilities:

- Multi Anti-Virus Scanners
- Automated Malware Analyzers
- Next-generation IDS[Both Desktop & Network based]
- Malware Sandbox
- Firewall and user defined security software
